Sequence 6, Application US/09372044A

Batent No. 6422126

GENERAL INFORMATION:

The APPLICANT: Dean FALB et al.

TITLE OF INVENTION: Compositions and Methods for the

TITLE OF INVENTION: Treatment and Diagnosis of Cardiovascular Disease
FILE REFERENCE: 7853-152

CURRENT APPLICATION NUMBER: US/09/372,044A

CURRENT FILING DATE: 1999-08-11

NUMBER OF SEQ ID NOS: 44

SOUTHWARE: FastSEQ for Windows Version 4.0

SEQ ID NO SEQ ID NOS: 44

LENGTH: 283

Patent No. 6753314

GENERAL INFORMATION:

APPLICANT: Giot, Loic

APPLICANT: Mansfield, Traci A.

TITLE OF INVENTION: Protein-Protein Complexes and Method of Using Same

FILE REFERENCE: 1596-542

CURRENT APPLICATION NUMBER: US/09/538,092

CURRENT FILING DATE: 2000-03-29

PRIOR FILING DATE: 1999-04-01

PRIOR PILING DATE: 1999-04-01

PRIOR FILING DATE: 2000-02-01

NUMBER OF SEQ ID NOS: 1387

SOFTWARE: CurapatSegFormatter Version 0.9

SEQ ID NO 941

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                         "Ion channels in the lens.";
Submitted (MAY-2000) to the EMBL/GenBank/DDBU databases.
-!-FUNCTION: Forms a channel through the mitochondrial outer membrane that allows diffusion of small hydrophilic molecules (By similarity).
-!-SUBCELGULAR LOCATION: Outer mitochondrial membrane.
-!- DOMAIN: Consists mainly of membrane-spanning sided beta-sheets.
-!- SUMILARITY: Belongs to the eukaryotic mitochondrial porin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TISSUE=Unition cord blood;

--- TISSUB SPECIFICITY: Widely expressed. Highest in testis.
--- DOMAIN: Consists mainly of membrane-spanning sided beta-sheets.
--- SIMILARITY: Belongs to the eukaryotic mitochondrial porin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SEGUENCE OF 1-253 FROM N.A.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          brain, and skeletal muscle.
DOMAIN: Consists mainly of membrane-spanning sided beta-sheets.
SIMILARITY: Belongs to the eukaryotic mitochondrial porin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                              15-UUL-1999 (Rel. 38, Created)
15-UUL-1999 (Rel. 38, Last sequence update)
05-UUL-2004 (Rel. 44, Last annotation update)
voltage-dependent anion-selective channel protein 3 (VDAC-3) (mVDAC3)
(Outer mitochondrial membrane protein porin 3).
                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FINITY (LICENSE) OF THE WHEN/GenBank/DDBJ databases. THORTHON: Forms a channel through the mitochondrial outer membrane that allows diffusion of small hydrophilic molecules (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        similarity).
SUBCELLULAR LOCATION: Outer mitochondrial membrane.
DOMAIN: Consists mainly of membrane-spanning sided beta-sheets.
SIMILARITY: Belongs to the eukaryotic mitochondrial porin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Hilschmann N.;

The plasma membrane of Xenopus laevis oocytes contains voltage-
T dependent anion-selective porin channels.";

Int. J. Biochem. Cell Biol. 32:225-234(2000)

- FUNCTION: Forms a channel inrough the mitochondrial outer membrane that allows diffusion of small hydrophilic molecules. The channel adopts an open conformation at low or zero membrane potential and a closed conformation at low or zero membrane potential and a closed conformation at low or zero membrane potential and a closed conformation at low or zero membrane potential and a closed conformation at low or zero membrane potential and a closed conformation at low or zero membrane potential and a closed conformation at power layour The open state selective [89 similarity).

- I SUNCELLUIAR LOCATION: Outer mitochondrial membrane (Potential).

- I TISSUE SPECIFICITY: Expressed in skeletal muscle and oocytes.

- DOMAIN: Consists mainly of membrane-spanning sided beta-sheets.

- I DOMAIN: Consists mainly of membrane-spanning sided beta-sheets.

- I SIMILARITY: Belongs to the eukaryotic mitochondrial porin family.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence Sequence S

GENERAL INFORMATION:

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster;

TILE REFERENCE: File Reference: 7326-094

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 42235

US-08-945-476-17

US-08-945-476-17

Sequent No. 6248517

GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION: DECORIN BINDING PROTEIN COMPOSITIONS

TITLE OF INVENTION: METHODS OF USE

TITLE OF SEQUENCES: 2

COMPUTER READABLE FORM:

MEDIUM TYRE: Floppy disk

COMPUTER: IN PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PATENTIN Release #1.0, Version #1.30 (EPO)

CURRENT APPLICATION NUMBER: US/08/945,476

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 34, Application US/09489352

Sequence 34, Application US/09489352

Patent No. 61207

GENERAL INFORMATION:

APPLICANT: Hook, Magnus

APPLICANT: Hook, Magnus

APPLICANT: Honson, Mark

ITLE OF INVENTION: DDPA AND DDPB COMPOSITIONS AND METHODS OF USE

TILE REFERENCE 4210.000500

CURRENT APPLICATION NUMBER: US/09/489,352

CURRENT FILING DATE: 2000-01-21

EARLIER APPLICATION NUMBER: 08/589,711

EARLIER PLILNG DATE: 1996-01-22

EARLIER FILING DATE: 1996-01-22

EARLIER FILING DATE: 1996-01-24

EARLIER FILING DATE: 1996-01-24

EARLIER FILING DATE: 1996-01-24

SARLIER PLILNG DATE: 1996-01-24

SARLIER PLING DATE: 1995-04-24

SOMPTANDED: DELGATION NUMBER: OS/427,023
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                             APPLICANT: Hook, Magnus

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GNAUGH
M polyprotein precursor - bunyamwera virus
N Contains: glycoprotein G1; glycoprotein G2; nonstructural protein
C,Species: bunyamwera virus
R,Lees, J.F.; Pringle, C.R.; Elliott, R.M.
Wirology 148; 1-14; 1986
A,Title: Nucleotide sequence of the Bunyamwera virus M RNA segment: conservation of stru
Virology 148; 1-14; 1986
A,Title: Nucleotide sequence of the Bunyamwera virus M RNA segment: conservation of stru
A,Reference number: A04101; MUID:86098655; PMID:3753629
A,Ference number: A04101; MUID:86098655; PMID:3753629
A,Residues: 1-1433 - LEE>
A,Forolecule type: genomic RNA
A,Residues: 1-1433 - LEE>
A,Forolecule type: genomic cleavages in vivo yield mature proteins including nonstruc
C,Genmentics:
A,Map position: segment M
C;Superfamily: bunyavirus M polyprotein;
C,Feywords: glycoprotein; nonstructural protein; polyprotein; transmembrane protein
C,Feywords: glycoprotein sequence #status predicted <AMPP>
F,1-16/Domain: signal sequence #status predicted <AMPP>
F,1-16/Domain: signal sequence #status predicted <AMPP>
F,1-16/Domain: signal sequence (ASP)
F,1-1433/Product: M polyprotein #status predicted <AMPP>

-!- FUNCTION: Irreversible conversion of delta-1-pyrroline-5-
-!- FUNCTION: Irreversible conversion of delta-1-pyrroline, to
glutamate. This is a necessary step in the pathway interconnecting
the urea and tricarboxylic acid cycles. The pathway interconnecting
the urea and tricarboxylic acid cycles. The preferred substrate is
glutamic gamma-semialdehyde, other substrates include succinic,

DISEASE: Defects in ALDH4A1 are the cause of hyperprolinemia type DISEASE: Defects in ALDH4A1 are the cause of hyperprolinemiation of delta-1-pyrroline-5-causally related to neurologic manifestations, including seizures and mental retardation.

SIMILARITY: Belongs to the aldehyde dehydrogenase family.
                                                          -!- SUBUNIT: Homodimer.
-!- SUBCELIAR LOCATION: Mitochondrial matrix.
-!- TISSUB SPECIFICITY: Highest expression is found in liver followed by skeletal muscle, kidney, heart, brain, placenta, lung and
glutaric and adipic semialdehydes. CATALYTIC ACTIVITY: 1-pyrroline-5-carboxylate + NAD(+) + \rm H(2)O
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        By similarity.

Delta-1-pyrroline-5-carboxylate dehydrogenase, mitochondrial precursor
(EC 1.5.1.12) (PSC dehydrogenase).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Demais S., Gavrias V., Scazzocchio C.;
"Primary structure of the nuclear prnC gene involved in the mitochondrial pathway for proline utilization in Aspergillus midulans.";
Submitted (APR-2000) to the EMBL/GenBank/DDBJ databases.
-! - CATALYTIC ACTIVITY: 1-pyrroline-5-carboxylate + NAD(+) + H(2)O
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               L-glutamate + NADH.
--- PATHWAY: Conversion from proline to glutamate; second step.
--- SUBCELFULAR LOCATION: Mitochondrial matrix.
---- SIMILARITY: Belongs to the aldehyde dehydrogenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mitochondrion (Potential).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Description

Sequence 20666, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:
Patent No. 6747137

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS

TITLE OF INVENTION: POR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: POR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/248,796A

CURRENT FILING DATE: 1999-02-13

PRIOR APPLICATION NUMBER: US 60/074,725

PRIOR APPLICATION NUMBER: US 60/096,409

PRIOR APPLICATION NUMBER: US 60/096,409
Sequence 1196, Application US/09538092

Sequence 1196, Application US/09538092

Sequence 1196, Application US/09538092

GENERAL INFORMATION:

APPLICANT: Glot, Loic

APPLICANT: Mansfield, Traci A.

TITLE OF INVENTION Protein-Protein Complexes and Method of Using Same

FILE REFERENCE: 15966-542

CURRENT APPLICATION NUMBER: US/09/538,092

CURRENT FILING DATE: 1999-04-01

PRIOR APPLICATION NUMBER: 60/127,352

PRIOR APPLICATION NUMBER: 60/127,352

PRIOR APPLICATION NUMBER: 60/127,352

PRIOR APPLICATION NUMBER: 60/178,965

PRIOR PILING DATE: 1999-04-01

PRIOR FILING DATE: 1999-04-01

NUMBER OF SEQ ID NOS: 1387

SOFTWARE: CLIRAPALSGFORMATER VETSION 0.9
```

LENGTH: 224

RESULT 6 US-09-710-279-1210
